Harvard-Smithsonian Center for Astrophysics
Raytheon ITSS

Operational Issues

Honeywell
Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

Questions

- 1. What is limiting station performance in terms of data quality, data quantity, etc?**
- 2. What things can be done to improve performance?**

Operational Issues

Honeywell

Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

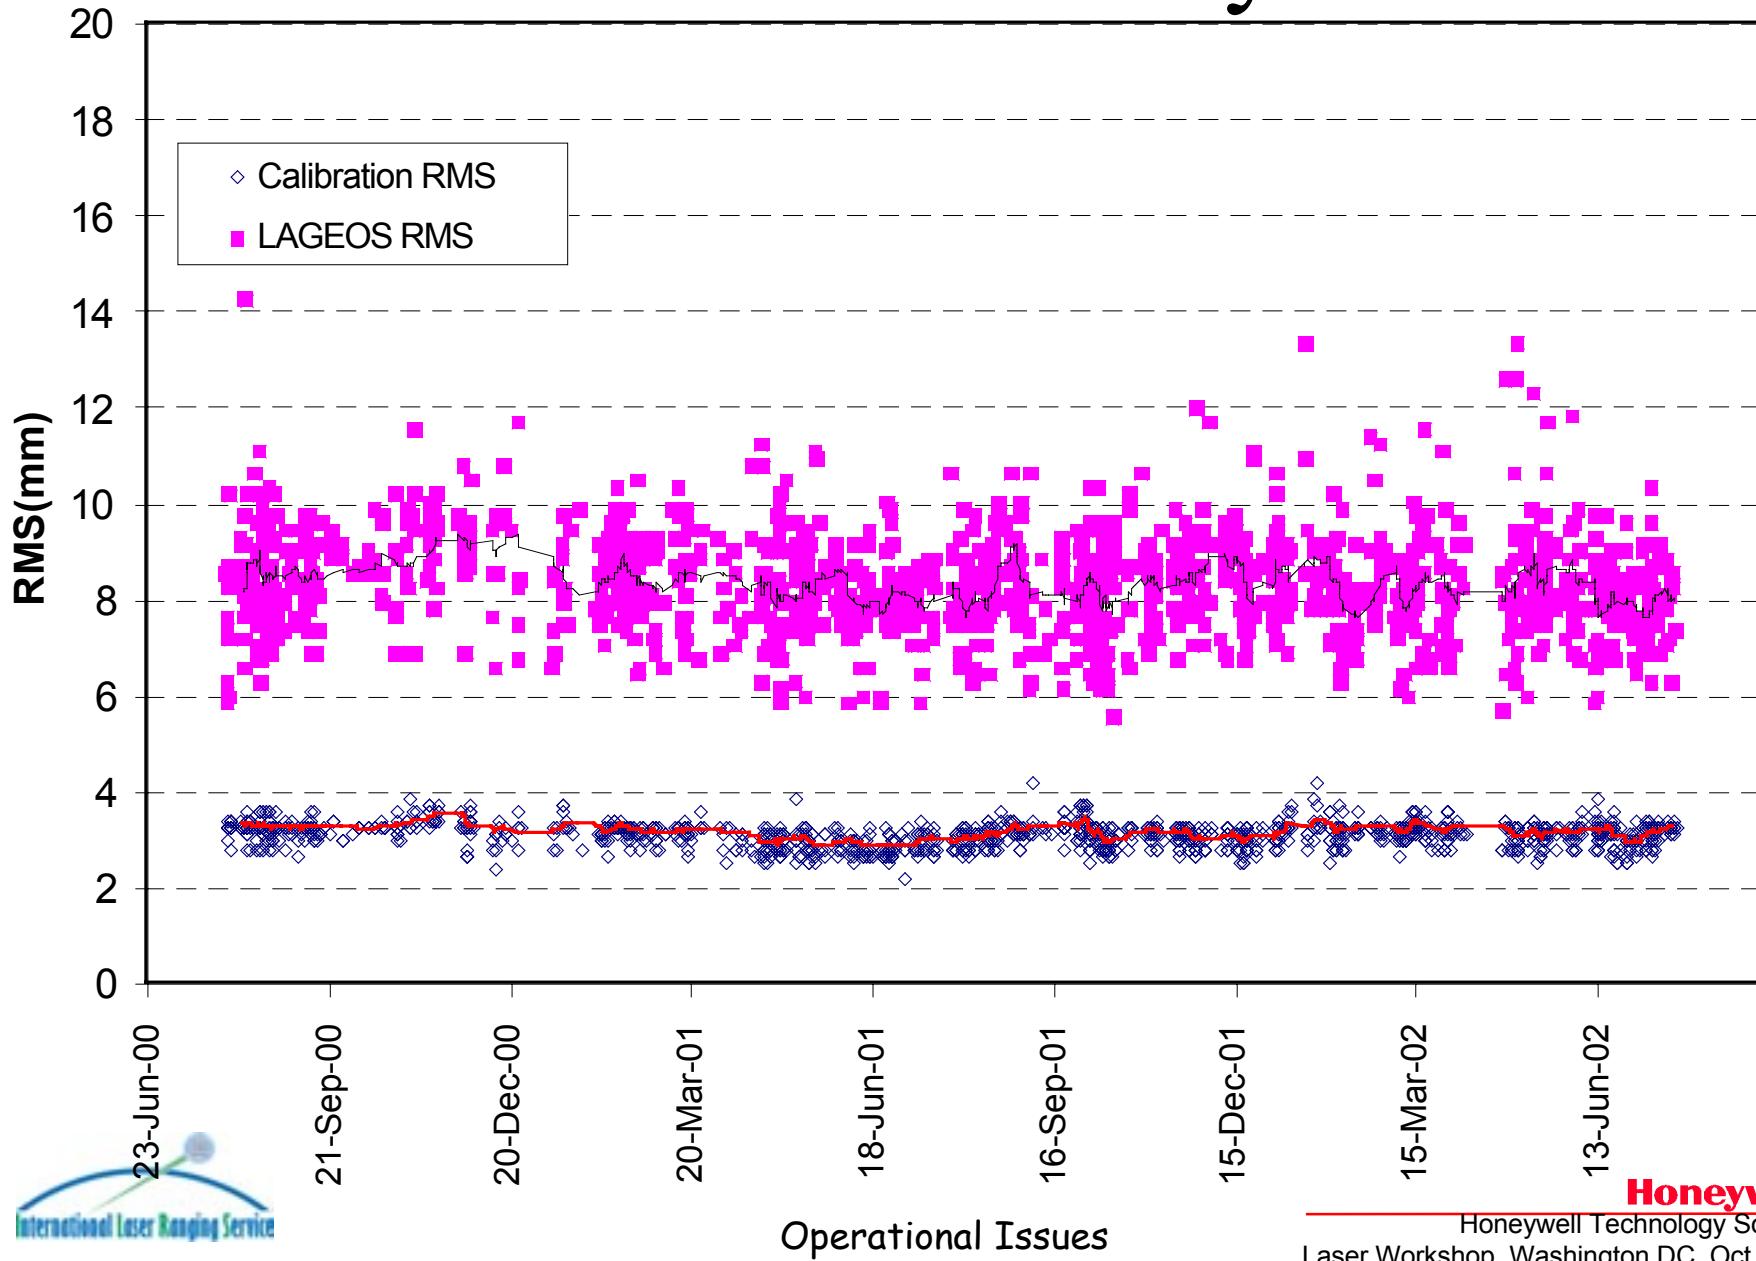

Mundane Operational Problems

- Format
 - ftp in the wrong mode (e.g. binary vs ascii)
- Data Integrity
 - Erroneous normal points
 - Bad met. data
 - Wrong day
 - Epoch timing blunders
 - Frequency errors
 - Missing or erroneous local survey ties
- Operational Compliance
 - Wrong satellite bin size (new missions)
 - Violation of Herstmonceux algorithm (bin formation)
 - Timely updating of configuration information

RMS Stability

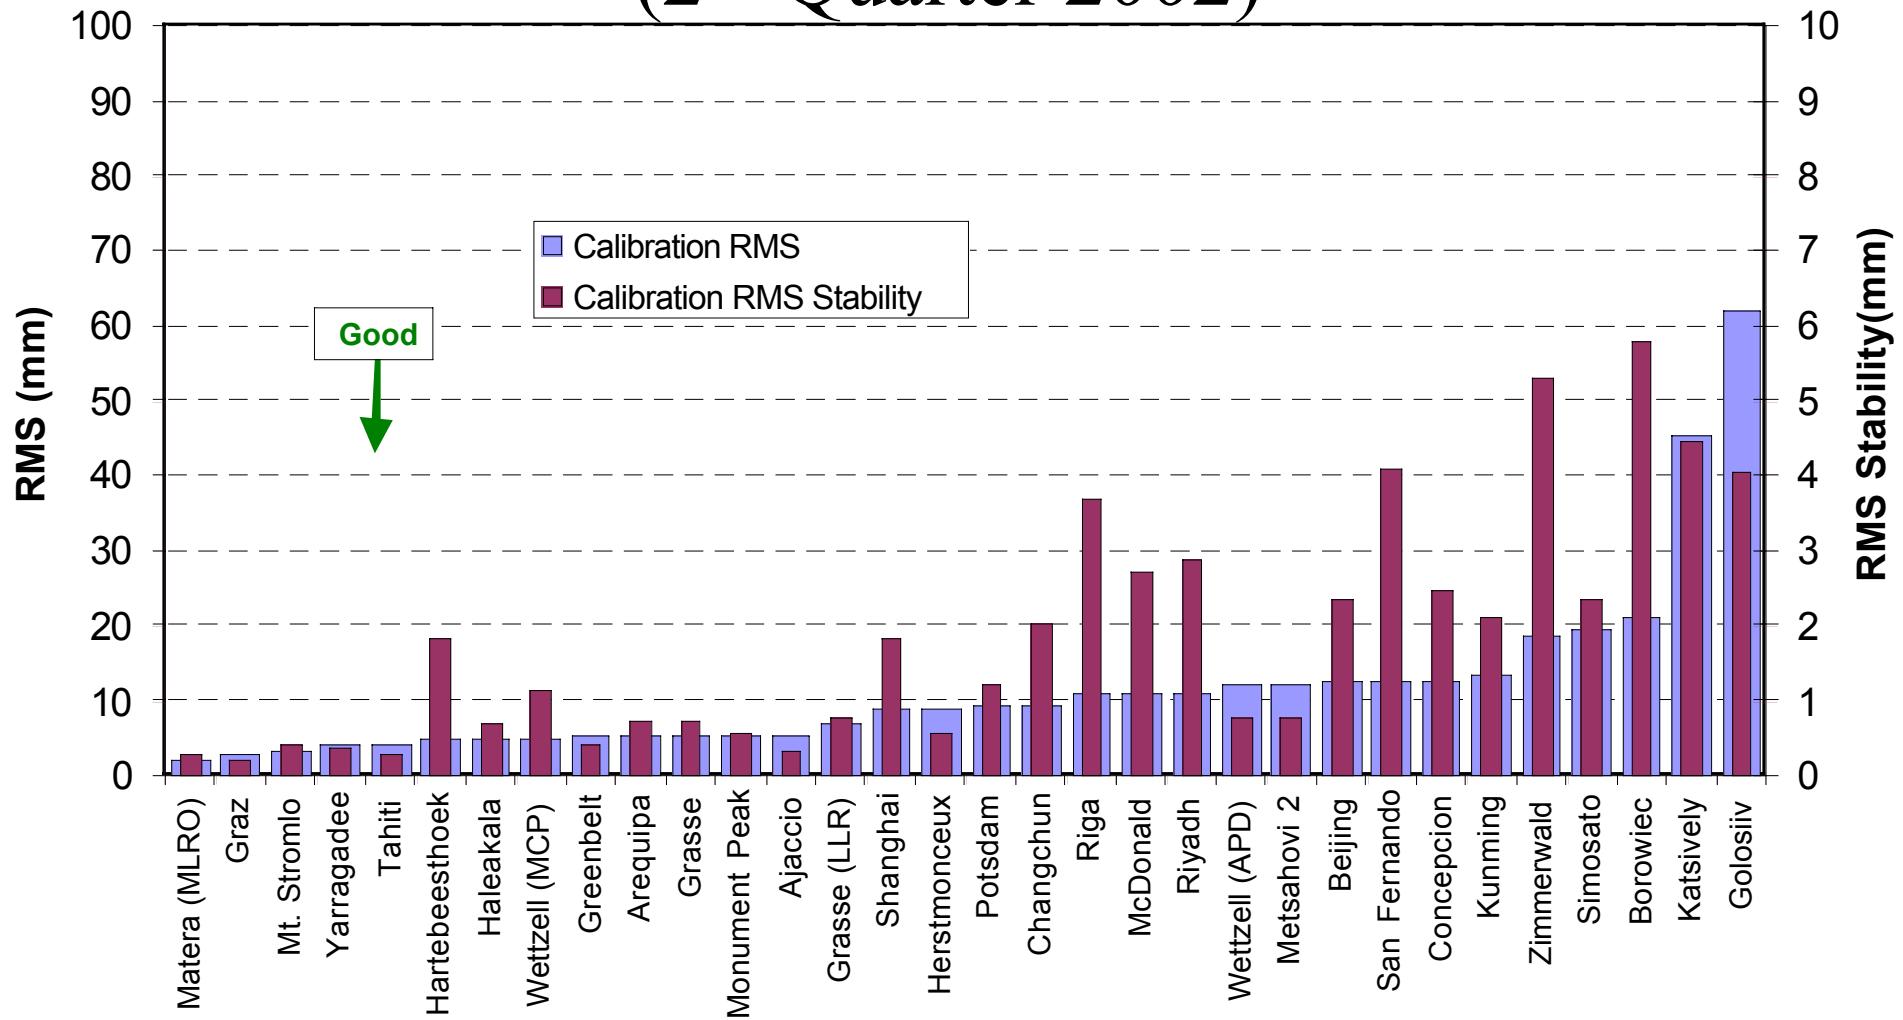

Honeywell

Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

Network Calibration Stabilities

(2nd Quarter 2002)

Operational Issues

Yarragadee Tracking Record

(Feb 2002)

Satellite	Passes	Scheduled	Percent	Reason
Ajisai	149	154	97	
BEC	43	49	88	
Champ	48	48	100	Used drag function and sub-daily predicts
ERS-2	67	71	94	
Etalon-1	15	16	94	Satellite mostly available in daytime
Etalon-2	40	45	89	
GFO	70	76	92	
GLONASS-78	0	7	0	Satellite non-operational
GLONASS-80	19	59	32	
GLONASS-84	47	76	62	
GLONASS-86	1	3	33	
GLONASS-87	9	12	75	
GPS-35	47	49	96	
GPS-36	41	43	95	
Jason	87	91	96	
LAGEOS	94	117	80	
LAGEOS-2	70	115	61	Interference with the sun
LRE	3	3	100	
Reflector	60	77	78	
Starlette	97	99	98	
Starshine	5	37	14	No drag function available
Stella	58	60	97	
Topex/Poseidon	95	96	99	
Totals	1165	1403	83	

>41 passes/day

ILRS Normal Points Production (by Month)

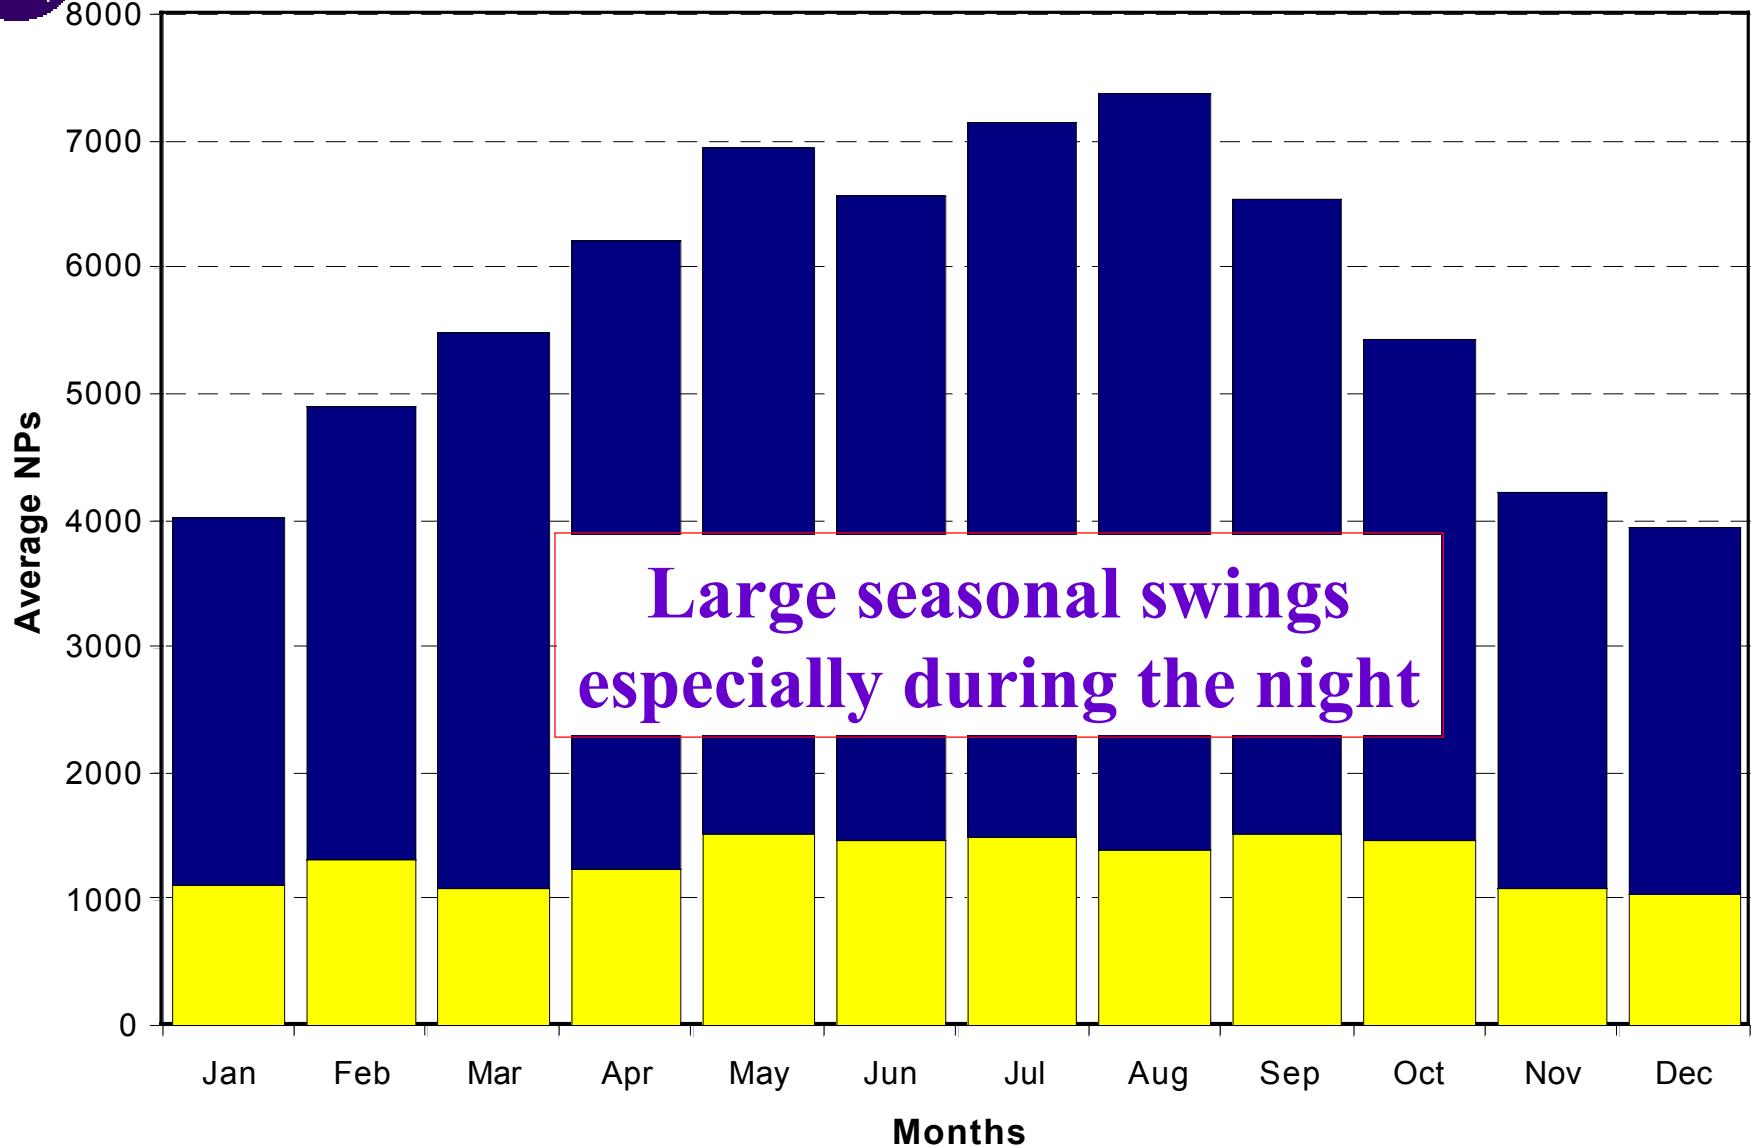

Operational Issues

Honeywell

Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

ERS-2 Normal Points

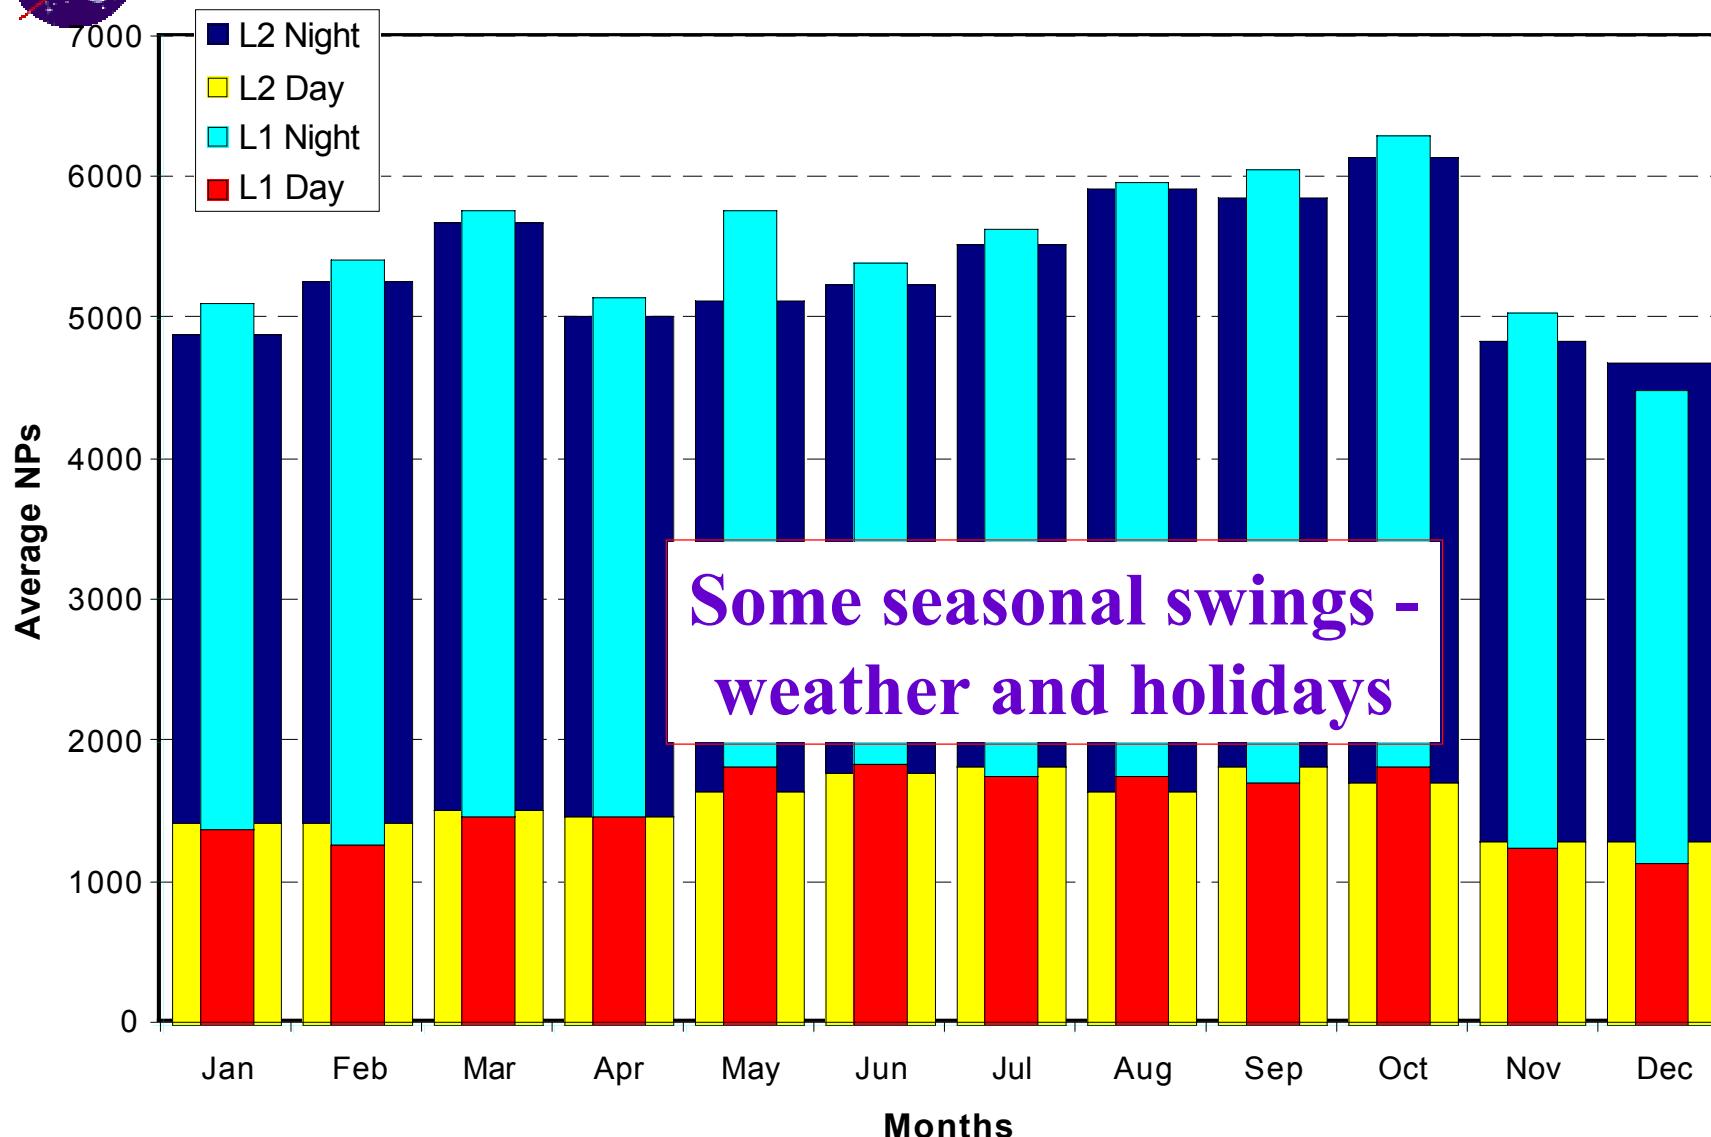

Operational Issues

Honeywell

Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

LAGEOS Normal Points

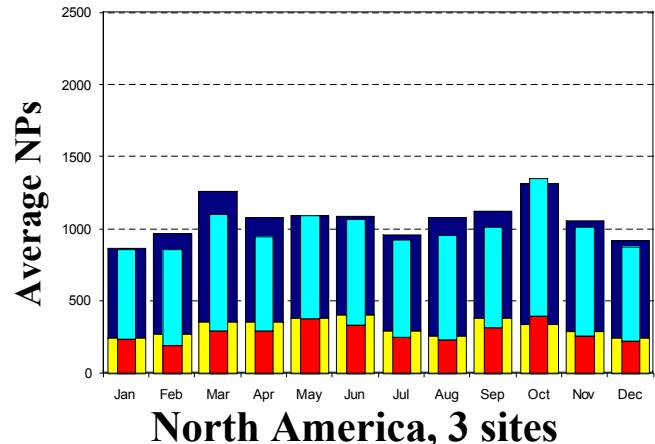

Operational Issues

Honeywell

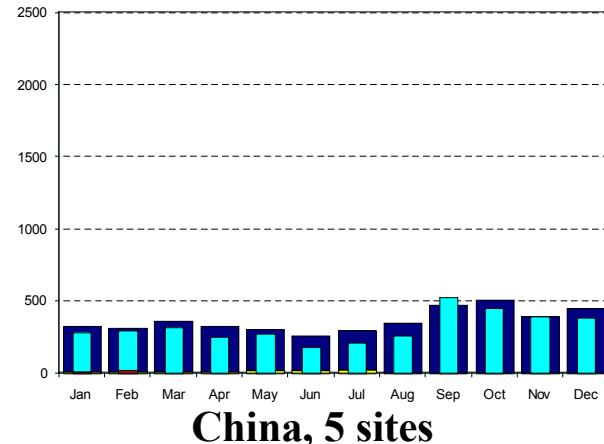

Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

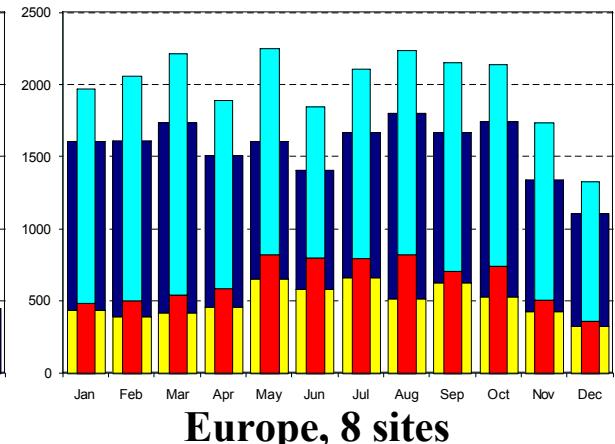

LAGEOS Normal Points by Region

North America, 3 sites

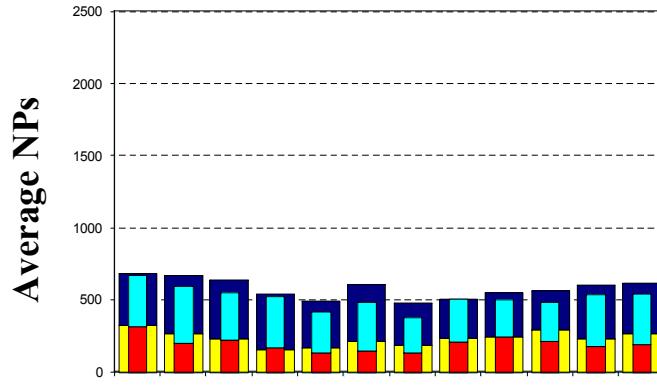

China, 5 sites

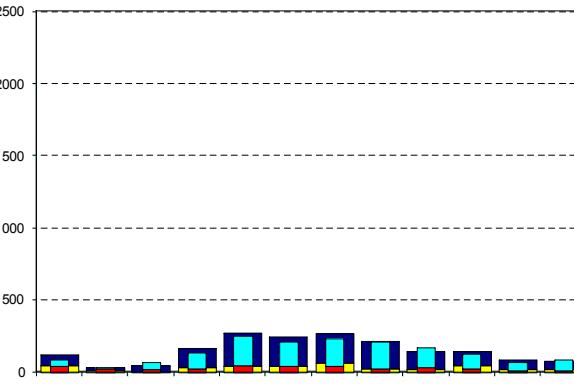

Europe, 8 sites

- █ L2 Night
- █ L2 Day
- █ L1 Night
- █ L1 Day

Australia, Yarragadee

South America, Arequipa

Seasonal swings vary by region.

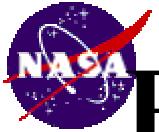

different weather patterns, satellite visibilities, and site capabilities

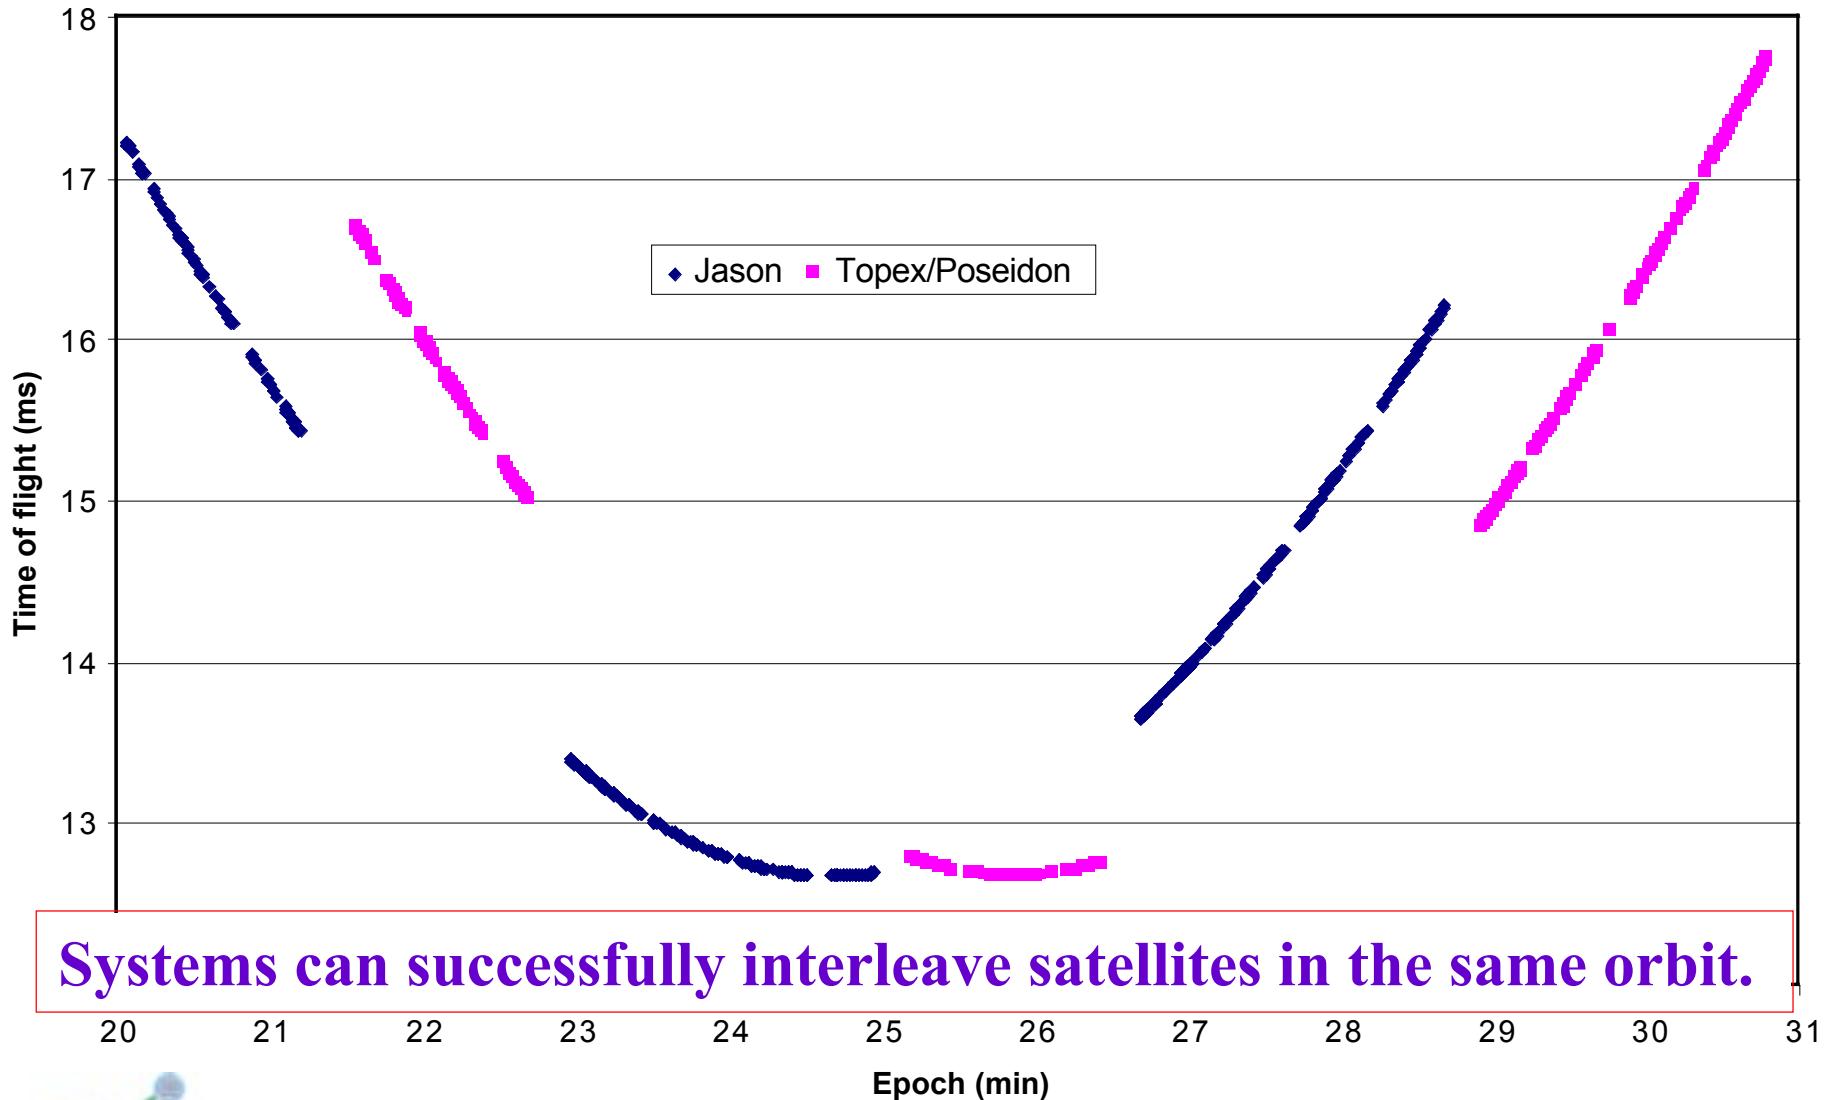

Operational Issues

Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

Pass Interleaving - Zimmerwald

Operational Issues

Honeywell

Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

Site Performance Issues

- Develop better understanding of your system
 - Aggressively investigate calibration instabilities
 - Closely monitor performance after a equipment or configuration change
- Share BEST system practices between systems and operators
- Implement minimum observation criteria for normal point creation
- Evaluate manual processes for possible process improvement
- Collocate with at least one other geodetic technique
- Provide accurate site tie information

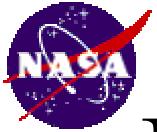

Tracking Issues

- Very Low LEOs (<500Km)
 - Fresh predicts using an alternate data source (i.e. GPS)
 - Drag function (depends upon solar activity)
- LAGEOS
 - Daytime ranging capabilities
- High
 - Weak link/daytime ranging
 - Investigate feasibility of transponders
- General
 - Low elevation tracking (i.e.< 20 degrees)

Operational Issues

Honeywell
Honeywell Technology Solutions Inc
Laser Workshop, Washington DC, Oct 7-11, 2002

ILRS Site Support Enhancements

- Develop a **single consolidated bias report**
- Provide on-site **data integrity algorithms**
- Improve **communication** from missions
 - Signal strength
 - Non-functioning satellites
 - RRA masking
 - Maneuvers notifications
 - Regular mission requirement assessment
- **Develop satellite ‘WORTH’ functions** based on scientific value
